

# WIRE & CABLE PROTECTION

*Moltec International is your best source  
for innovative wire and cable protection solutions.*

Grip Lock non-metallic conduits are engineered for enhanced performance and tested to the highest standards to meet rigorous application demands. Our conduits deliver ultimate electrical wire and cable protection against mechanical forces and environmental degradation, while providing a visually pleasing installation.

Grip Lock fittings are available in various body configurations and are offered in all thread types and sizes, in either nylon or metal. All fittings feature our revolutionary integrated locking collar that prevents loss of individual locking components and results in an easy to install and secure connection.

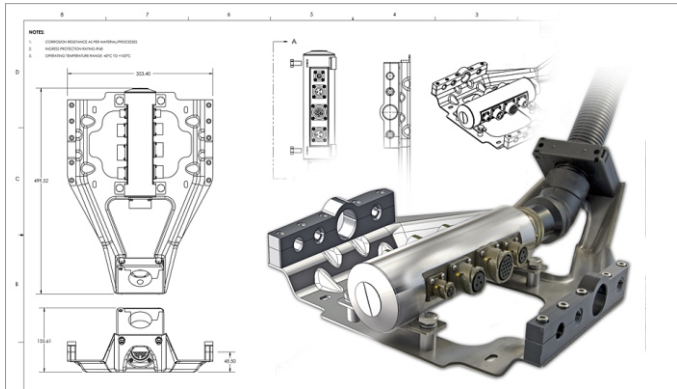

Moltec custom solutions are engineered to customer specifications. We offer metal-threaded swivel fittings, specialty connectors, and adapters in various body configuration and threads that deliver dependable watertight and vibration-proof termination. Black anodizing or electro-less nickel plating options ensure excellent wear and corrosion resistance.

We are proud to offer the Gimota line of the finest circular and data connectors, designed for rail, signalling and communication applications. Circular connectors are available in standard, MIL-Spec, rail-specific and EMC designs with a plethora of layout options. The D-Sub and TRAC F data signal connectors are available with 360° shielding to protect against electromagnetic interference.

### Design & Development

Working within defined project parameters, our engineering team drives the product development process from concept to finished product. We offer conceptual design, industrial and mechanical engineering, CAD modeling and detailing, prototyping, product integration with customer designs, and full system layout.

### Manufacturing & Production

Moltec specializes in producing custom fittings and adapters as well as complex profiled components using the latest machining techniques. Components are produced from aluminum, nylon, steel, or brass and are plated for increased corrosion resistance and mechanical strength. Our custom manufacturing capabilities allow us to increase our assortment of products, thus giving our customers access to a more comprehensive product selection.

### Assemblies & Harnesses

Our engineering, manufacturing and production services work in unison to create custom solutions in the form of kits, assemblies and complex fully-wired cable harnesses. Solutions are manufactured, assembled, and tested in our ISO 9001:2015 facility and delivered as an easy out of the box Plug & Play System. All projects are built to customer specifications for a perfect fit and hassle-free installation.
